
QAFT candidate: two cameras ×8FPS, ten-minute local test
Other host programs retained; these results do not establish production readiness
Selected FPS (rolling telemetry; target8)
capacity-01
capacity-02
Minutes of measured steady window
Independent scene source-PES → agent latency (ms)
Minutes of measured steady window
Container memory (MiB)
Minutes of measured steady window
Container CPU cores used (API cgroup counter)
Minutes of measured steady window
Maximum core temperature (°C)
Guard threshold; requires5 consecutive samples
Minutes of measured steady window
Node device busy (%), approximate GPU alignment
Node NPU busy
Node GPU Compute engine
Minutes of measured steady window
